Partial Refill to Begin at Lake Dunlap

For more information

LaMarriol Smith, GBRA, (830) 379-5822, lsmith@gbra.org

SEGUIN — Crews at Lake Dunlap will move to Lake Gonzales to make emergency repairs to a spillgate that did not function properly following the flood event from heavy rains recently (9 inches of rain in Caldwell County). Upon completion of that repair, the crews will finish up repair work at Lake Dunlap. In the meantime, refilling at Lake Dunlap will begin Wednesday, Feb. 1, 2012, to a level that will be a foot and a half below its normal pond level.

Based on the current inflow, the refilling process to the prescribed level should take about a week and be reached by Wednesday, Feb. 8, 2012. Hydroelectric crews have indicated Lake Dunlap will remain at a foot and a half below its normal pond level until work is completed on the dam. Crews estimated completion of repairs should occur around March 30, 2012.

GBRA staff will continue to communicate with the contractor about these matters and will relay significant lake level or schedule changes to Lake Dunlap constituents accordingly.

For Guadalupe River emergency information and/or important updates, follow GBRA on Twitter at GBRATX.

The GBRA was established by the Texas Legislature in 1933 as a water conservation and reclamation district. GBRA provides stewardship for the water resources in its 10-county statutory district, which begins near the headwaters of the Guadalupe and Blanco rivers, ends at San Antonio Bay, and includes Kendall, Comal, Hays, Caldwell, Guadalupe, Gonzales, DeWitt, Victoria, Calhoun, and Refugio counties.
