

### **Canyon Lake Flood Release Advisory**

Canyon Reservoir has reached its maximum conservation pool and is currently at 910.95 mean sea level (msl), triggering the necessity of increased water releases at the direction of the U.S. Army Corps of Engineers (USACE).

Beginning at 1:00pm today, October 17, releases will increase to approximately 700 cubic feet per second (cfs) until Friday, Oct. 19, at which time an assessment will be made to determine the need for increased flood releases. Based on preliminary inflow estimates, the USACE anticipates the lake to rise an additional 5 feet in the coming days. Releases and lake elevation are based on current inflows and rainfall. Changing weather conditions may impact future releases.

Property owners, recreationalists and other stakeholders should take notice of the changing downstream river flows. Canyon releases and stream flow data may be found at <https://bit.ly/2NI2HTz>.
